

Vision 2030

A Sustainable Path to 100% Solar Energy

In line with India's ambitious aim of generating 500 GW renewable energy by 2030, Singhal Commodities Pvt Ltd proudly presents its Vision 2030, outlining our commitment to sustainability and a cleaner future. Dedicatedly moving towards our goal, we have currently surpassed the 5% mark in switching to sustainable energy by installation of a solar generating system.

In addition to demonstrating our commitment to environmental stewardship, our strategic investment in solar energy is expected to result in significant passive opportunity cost savings in electricity bills post the payback period of the initial investment. As we become more aware of the issues surrounding rising taxes and electricity costs, we are taking proactive steps to ensure long-term financial sustainability by switching to solar power.

Sustainability is important to SCPL as a responsible corporate citizen, and this change fits in seamlessly with our guiding principles. We hope to help the government's renewable energy mission while also making a positive impact on the environment by lowering our dependency on non-renewable energy sources. Such steps are a testament to our commitment to sustainable methods to create a positive impact.

In addition to establishing SCPL as a sustainable manufacturing company, we hope that our Vision 2030 will encourage other companies to take up similar initiatives. Through this Vision, we are investing in a future where energy sources are clean, expenses are minimised, and our legacy is shaped by our unwavering dedication to sustainability.

We appreciate your support as we set out on this transformative path to 100% solar energy, ensuring future generations have a sustainable, environmentally responsible, and financially stable future.

- Team SCPL
